

Wire Pocket

Wi·re·Pock·et

Noun \wī(ə)r pəkət\

: a component used to conceal and manage wire efficiently throughout the DynoRaxx Evolution FR.

The DynoRaxx[®] Wire Pocket is a wire management system that allows installers to create a clean aesthetically pleasing system in little to no time. The Wire Pocket can be used to hide jumpers between rows and is the perfect component for trunk homerun wires. The J Channel design allows wiring to be entered at any point, nullifying the need for fishing wires through conduit. Wiring can be laid out and simply tucked into place.

Efficient

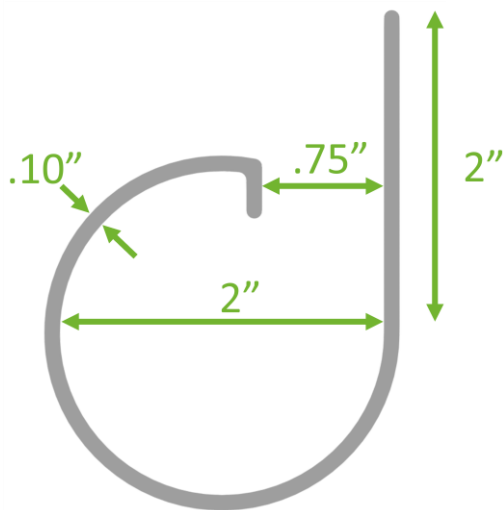

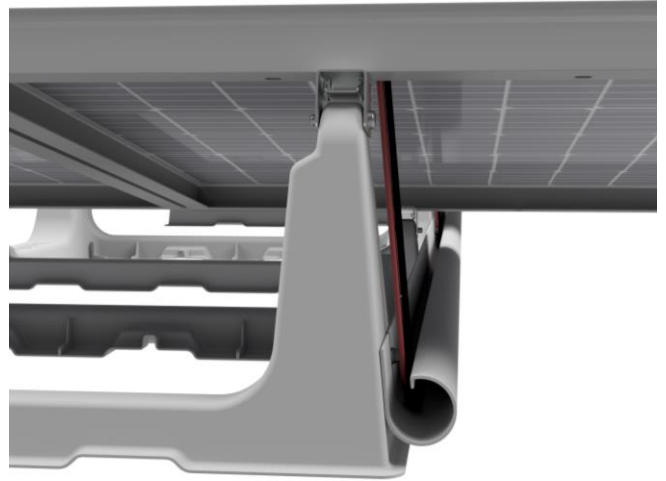

- Wire can enter channel at any point

Clean

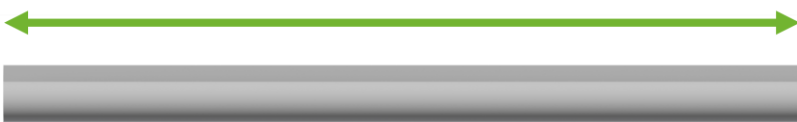

- Wire is virtually hidden on system

Durable

- Wire is safely protected in all weather conditions

Purchased in 10' Sticks

Simple Three Step Design

1. Layout and zip - tie wire on roof in desired location
2. Attach DynoRaxx Wire Pocket to the tall leg of the basket using self-tapping screws.
3. Tuck wire into Wire Pocket

DynoRaxx® Wire Pocket is constructed of PVC with UV Inhibitor
